

MATHB8.18 EVALUATE A LINEAR FUNCTION: WORD PROBLEMSC = 18H + 634) THIS EQUATION SHOWS HOW THE COST OF

MATHB8.18 EVALUATE A LINEAR FUNCTION: WORD PROBLEMSC = 18H + 634) THIS EQUATION SHOWS HOW THE COST OF A PRODUCT OR SERVICE VARIES BASED ON DIFFERENT FACTORS. UNDERSTANDING HOW TO EVALUATE LINEAR FUNCTIONS IS ESSENTIAL IN SOLVING REAL-WORLD PROBLEMS, ESPECIALLY THOSE INVOLVING COSTS, REVENUES, AND OTHER FINANCIAL CALCULATIONS. IN THIS ARTICLE, WE WILL EXPLORE THE CONCEPTS BEHIND LINEAR FUNCTIONS, HOW TO INTERPRET AND EVALUATE THEM IN WORD PROBLEMS, AND PRACTICAL EXAMPLES TO ENHANCE YOUR UNDERSTANDING.

UNDERSTANDING LINEAR FUNCTIONS IN WORD PROBLEMS

WHAT IS A LINEAR FUNCTION?

A LINEAR FUNCTION IS A MATHEMATICAL RELATIONSHIP WHERE THE OUTPUT CHANGES AT A CONSTANT RATE CONCERNING THE INPUT. IT CAN BE EXPRESSED IN THE FORM:

$$f(h) = mh + b$$

WHERE:

- m IS THE SLOPE OR RATE OF CHANGE,
- b IS THE Y-INTERCEPT OR INITIAL VALUE,
- h IS THE INDEPENDENT VARIABLE (OFTEN REPRESENTING TIME OR QUANTITY),
- $f(h)$ IS THE DEPENDENT VARIABLE (SUCH AS COST, DISTANCE, OR REVENUE).

IN THE CONTEXT OF THE EQUATION $c = 18h + 634$, THE FUNCTION MODELS HOW THE TOTAL COST c DEPENDS ON THE NUMBER OF HOURS h .

BREAKING DOWN THE LINEAR EQUATION: $c = 18h + 634$

COMPONENTS OF THE EQUATION

- SLOPE (18): FOR EACH ADDITIONAL HOUR h , THE COST INCREASES BY 18 UNITS.
- Y-INTERCEPT (634): WHEN $h = 0$, THE INITIAL COST IS 634 UNITS, REPRESENTING FIXED COSTS OR BASE CHARGES.
- INDEPENDENT VARIABLE (h): REPRESENTS THE NUMBER OF HOURS OR UNITS INVOLVED IN THE PROBLEM.

INTERPRETING THE EQUATION IN REAL-LIFE SCENARIOS

SUPPOSE THIS EQUATION MODELS A SERVICE WHERE:

- THE FIXED FEE IS 634 DOLLARS,
- THE VARIABLE COST IS 18 DOLLARS PER HOUR.

FOR EXAMPLE, IF YOU USE THE SERVICE FOR 10 HOURS:

$$c = 18 \times 10 + 634 = 180 + 634 = 814$$

THE TOTAL COST WOULD BE 814 DOLLARS.

EVALUATING THE LINEAR FUNCTION IN WORD PROBLEMS

STEP-BY-STEP APPROACH

1. IDENTIFY THE VARIABLES: DETERMINE WHAT THE INDEPENDENT VARIABLE (h) AND THE DEPENDENT VARIABLE (c) REPRESENT.
2. UNDERSTAND THE EQUATION: RECOGNIZE THE MEANING OF THE SLOPE AND INTERCEPT IN CONTEXT.
3. SUBSTITUTE KNOWN VALUES: PLUG IN SPECIFIC VALUES OF (h) TO FIND (c) .
4. INTERPRET THE RESULT: RELATE THE CALCULATED VALUE BACK TO THE REAL-WORLD SCENARIO.

EXAMPLE WORD PROBLEM

A COMPANY CHARGES A FIXED FEE OF \$634 PLUS \$18 PER HOUR FOR A CONSULTING SERVICE. HOW MUCH WILL THE SERVICE COST IF THE CLIENT USES IT FOR 15 HOURS?

SOLUTION:

- GIVEN $(h = 15)$,
- USE THE EQUATION $(c = 18h + 634)$,
- CALCULATE:

$$c = 18 \times 15 + 634 = 270 + 634 = 904$$

ANSWER: THE TOTAL COST FOR 15 HOURS OF SERVICE IS \$904.

APPLICATIONS OF LINEAR FUNCTIONS IN REAL LIFE

1. COST ESTIMATION

BUSINESSES OFTEN USE LINEAR FUNCTIONS TO ESTIMATE COSTS BASED ON USAGE OR TIME. FOR EXAMPLE, ELECTRICITY COMPANIES MAY CHARGE A FIXED FEE PLUS A RATE PER KILOWATT-HOUR.

2. REVENUE AND PROFIT CALCULATIONS

COMPANIES DETERMINE REVENUE BY MULTIPLYING THE PRICE PER UNIT BY THE NUMBER OF UNITS SOLD, OFTEN MODELED LINEARLY.

3. DISTANCE AND SPEED PROBLEMS

THE RELATIONSHIP BETWEEN DISTANCE TRAVELED, SPEED, AND TIME IS LINEAR: $(d = rt)$.

ADDITIONAL EXAMPLES AND PRACTICE

EXAMPLE 1: FINDING COST FOR A DIFFERENT NUMBER OF HOURS

USING THE SAME EQUATION $(c = 18h + 634)$, WHAT IS THE COST FOR 20 HOURS?

SOLUTION:

_

$$c = 18 \times 20 + 634 = 360 + 634 = 994$$

\]

RESULT: THE COST FOR 20 HOURS IS \$994.

EXAMPLE 2: DETERMINING THE NUMBER OF HOURS FOR A GIVEN COST

IF THE TOTAL COST IS \$994, HOW MANY HOURS WERE USED?

SOLUTION:

\[

$$994 = 18h + 634$$

\]

SUBTRACT 634 FROM BOTH SIDES:

\[

$$994 - 634 = 18h$$

\]

\[

$$360 = 18h$$

\]

DIVIDE BOTH SIDES BY 18:

\[

$$h = \frac{360}{18} = 20$$

\]

ANSWER: 20 HOURS.

KEY TAKEAWAYS FOR EVALUATING LINEAR WORD PROBLEMS

- IDENTIFY WHAT EACH PART OF THE LINEAR EQUATION REPRESENTS IN REAL LIFE.
- SUBSTITUTE KNOWN VALUES CAREFULLY AND SOLVE STEP-BY-STEP.
- UNDERSTAND THE CONTEXT TO INTERPRET THE MEANING OF THE RESULTS ACCURATELY.
- PRACTICE WITH DIFFERENT SCENARIOS TO STRENGTHEN YOUR SKILLS IN EVALUATING LINEAR FUNCTIONS.

COMMON MISTAKES TO AVOID

- MISINTERPRETING THE SLOPE AND INTERCEPT: REMEMBER THAT THE SLOPE INDICATES THE RATE OF CHANGE, AND THE INTERCEPT IS THE STARTING VALUE.
- INCORRECT SUBSTITUTION: ALWAYS DOUBLE-CHECK YOUR CALCULATIONS WHEN PLUGGING IN VALUES.
- IGNORING UNITS: KEEP TRACK OF UNITS (DOLLARS, HOURS, ETC.) TO AVOID CONFUSION.
- ASSUMING LINEARITY WHEN IT'S NOT: NOT ALL RELATIONSHIPS ARE LINEAR; ENSURE THE PROBLEM FITS THE LINEAR MODEL BEFORE APPLYING IT.

CONCLUSION

EVALUATING LINEAR FUNCTIONS LIKE $(c = 18h + 634)$ IN WORD PROBLEMS IS A FUNDAMENTAL SKILL THAT HELPS IN UNDERSTANDING VARIOUS REAL-WORLD SCENARIOS INVOLVING COSTS, REVENUES, AND OTHER RELATIONSHIPS. BY MASTERING THE APPROACH—IDENTIFYING VARIABLES, INTERPRETING THE COMPONENTS OF THE EQUATION, SUBSTITUTING VALUES, AND INTERPRETING RESULTS—YOU CAN EFFECTIVELY SOLVE MANY PRACTICAL PROBLEMS. REGULAR PRACTICE WITH DIVERSE

EXAMPLES WILL ENHANCE YOUR ABILITY TO ANALYZE AND INTERPRET LINEAR FUNCTIONS CONFIDENTLY.

WHETHER DEALING WITH SERVICE CHARGES, BUDGETING, OR BUSINESS PLANNING, UNDERSTANDING HOW TO EVALUATE THESE EQUATIONS ENABLES INFORMED DECISION-MAKING AND ACCURATE PREDICTIONS. KEEP PRACTICING, AND YOU'LL BECOME PROFICIENT IN APPLYING LINEAR FUNCTIONS TO A WIDE RANGE OF REAL-LIFE SITUATIONS.

FREQUENTLY ASKED QUESTIONS

WHAT DOES THE LINEAR FUNCTION $C = 18H + 634$ REPRESENT IN REAL-WORLD SCENARIOS?

IT MODELS THE TOTAL COST (C) BASED ON THE NUMBER OF HOURS (H) WORKED OR USED, WHERE 634 IS THE FIXED STARTING COST AND 18 IS THE COST PER HOUR.

HOW CAN I USE THE EQUATION $C = 18H + 634$ TO FIND THE TOTAL COST FOR A SPECIFIC NUMBER OF HOURS?

SUBSTITUTE THE DESIRED NUMBER OF HOURS (H) INTO THE EQUATION AND CALCULATE $C = 18H + 634$ TO FIND THE TOTAL COST.

WHAT DOES THE COEFFICIENT 18 IN THE EQUATION $C = 18H + 634$ INDICATE?

IT REPRESENTS THE VARIABLE COST PER HOUR, MEANING EACH ADDITIONAL HOUR ADDS \$18 TO THE TOTAL COST.

IF THE TOTAL COST C IS \$1000, HOW MANY HOURS H WERE USED ACCORDING TO THE EQUATION $C = 18H + 634$?

SOLVE FOR H : $1000 = 18H + 634$; SUBTRACT 634 FROM 1000 TO GET 366, THEN DIVIDE BY 18 TO FIND $H \approx 20.33$ HOURS.

WHAT IS THE SIGNIFICANCE OF THE CONSTANT 634 IN THE LINEAR FUNCTION $C = 18H + 634$?

IT REPRESENTS THE FIXED OR INITIAL COST THAT DOES NOT DEPEND ON THE NUMBER OF HOURS, SUCH AS SETUP OR BASE FEES.

HOW CAN THIS LINEAR MODEL HELP IN BUDGETING OR COST ESTIMATION?

BY PLUGGING IN DIFFERENT VALUES OF HOURS (H), YOU CAN PREDICT TOTAL COSTS AND PLAN BUDGETS ACCORDINGLY.

WHAT IS THE SLOPE OF THE LINE REPRESENTED BY $C = 18H + 634$, AND WHAT DOES IT TELL US?

THE SLOPE IS 18, INDICATING THAT FOR EACH ADDITIONAL HOUR, THE TOTAL COST INCREASES BY \$18.

CAN THIS LINEAR FUNCTION BE USED FOR NON-INTEGERS VALUES OF H , SUCH AS 10.5 HOURS?

YES, SINCE THE FUNCTION MODELS COST LINEARLY, IT CAN BE APPLIED TO ANY REAL NUMBER OF HOURS, INCLUDING FRACTIONAL HOURS.

ADDITIONAL RESOURCES

MATHB8.18 EVALUATE A LINEAR FUNCTION: WORD PROBLEMS $C = 18H + 634$ — THIS EQUATION SHOWS HOW THE COST OF

UNDERSTANDING THE PRACTICAL APPLICATIONS OF MATHEMATICAL CONCEPTS IS ESSENTIAL IN BRIDGING THE GAP BETWEEN ABSTRACT NUMBERS AND REAL-WORLD SCENARIOS. ONE SUCH CONCEPT, THE LINEAR FUNCTION, PLAYS A PIVOTAL ROLE IN VARIOUS INDUSTRIES, FROM FINANCE TO LOGISTICS. THE EQUATION $C = 18H + 634$ EXEMPLIFIES HOW LINEAR FUNCTIONS CAN MODEL COSTS BASED ON DIFFERENT VARIABLES, IN THIS CASE, HOURS WORKED OR USED. THIS ARTICLE EXPLORES THE MEANING BEHIND THIS EQUATION, HOW TO EVALUATE IT IN PRACTICAL CONTEXTS, AND THE IMPORTANCE OF MASTERING SUCH FUNCTIONS FOR MAKING INFORMED DECISIONS.

THE FOUNDATION OF LINEAR FUNCTIONS IN WORD PROBLEMS

BEFORE DIVING INTO THE SPECIFICS OF THE EQUATION $C = 18H + 634$, IT'S CRUCIAL TO UNDERSTAND WHAT A LINEAR FUNCTION ENTAILS.

WHAT IS A LINEAR FUNCTION?

A LINEAR FUNCTION IS A MATHEMATICAL RELATIONSHIP BETWEEN TWO VARIABLES—TYPICALLY REPRESENTED AS X AND Y —WHERE THE GRAPH FORMS A STRAIGHT LINE. ITS GENERAL FORM IS:

$$Y = MX + B$$

- M REPRESENTS THE SLOPE (RATE OF CHANGE)
- B IS THE Y -INTERCEPT (INITIAL VALUE OR STARTING POINT)

IN THE CONTEXT OF COST ANALYSIS, THIS FORM ELEGANTLY MODELS SITUATIONS WHERE COSTS INCREASE OR DECREASE AT A CONSTANT RATE AS A VARIABLE (LIKE HOURS WORKED) CHANGES.

WHY ARE LINEAR FUNCTIONS USEFUL IN WORD PROBLEMS?

LINEAR FUNCTIONS ARE VALUABLE BECAUSE THEY SIMPLIFY COMPLEX RELATIONSHIPS INTO PREDICTABLE, STRAIGHT-LINE MODELS. THEY ALLOW US TO:

- CALCULATE TOTAL COSTS BASED ON VARYING LEVELS OF ACTIVITY
- IDENTIFY THE INITIAL FIXED COST
- UNDERSTAND HOW COSTS CHANGE WITH ADDITIONAL USAGE OR TIME

DISSECTING THE EQUATION: $C = 18H + 634$

LET'S ANALYZE EACH COMPONENT OF THIS SPECIFIC LINEAR FUNCTION.

THE VARIABLES: C AND H

- C : TOTAL COST IN DOLLARS
- H : NUMBER OF HOURS WORKED, USED, OR INVOLVED

THE COMPONENTS

- $18H$: REPRESENTS THE VARIABLE COST, WHICH DEPENDS ON THE NUMBER OF HOURS. THE COEFFICIENT 18 INDICATES THAT FOR EACH ADDITIONAL HOUR, THE TOTAL COST INCREASES BY \$18.
- 634 : THE FIXED COST OR STARTING FEE, WHICH REMAINS CONSTANT REGARDLESS OF THE HOURS. THIS COULD BE A BASE FEE OR INITIAL SETUP COST.

INTERPRETATION IN REAL-WORLD CONTEXTS

THIS EQUATION COULD MODEL VARIOUS SCENARIOS:

- FREELANCE WORK: AN INITIAL CONSULTATION FEE OF \$634, PLUS \$18 PER HOUR OF WORK.
- EQUIPMENT RENTAL: A FLAT FEE OF \$634 PLUS \$18 PER HOUR OF RENTAL.
- SERVICE CHARGES: AN INITIAL SERVICE SETUP FEE PLUS HOURLY CHARGES BASED ON USAGE.

UNDERSTANDING THESE COMPONENTS ALLOWS STAKEHOLDERS TO ESTIMATE TOTAL COSTS ACCURATELY AT DIFFERENT LEVELS OF ACTIVITY.

EVALUATING THE FUNCTION: PRACTICAL APPLICATIONS

EVALUATING A LINEAR FUNCTION INVOLVES PLUGGING IN SPECIFIC VALUES FOR THE VARIABLE (h) TO FIND THE CORRESPONDING COST (c). THIS PROCESS IS STRAIGHTFORWARD BUT FUNDAMENTAL FOR DECISION-MAKING.

STEP-BY-STEP EVALUATION

1. IDENTIFY THE VALUE OF h : DETERMINE HOW MANY HOURS ARE INVOLVED.
2. SUBSTITUTE h INTO THE EQUATION: REPLACE h WITH THE SPECIFIC NUMBER.
3. PERFORM THE CALCULATIONS: MULTIPLY 18 BY h , THEN ADD 634.
4. INTERPRET THE RESULT: THIS GIVES THE TOTAL COST FOR THAT PARTICULAR NUMBER OF HOURS.

REAL-WORLD EXAMPLES OF EVALUATION

LET'S CONSIDER SOME EXAMPLE SCENARIOS TO ILLUSTRATE HOW TO EVALUATE THE FUNCTION.

EXAMPLE 1: ESTIMATING COST FOR 10 HOURS

$$- h = 10$$

CALCULATING:

$$c = 18(10) + 634$$

$$c = 180 + 634 = 814$$

RESULT: THE TOTAL COST FOR 10 HOURS IS \$814.

EXAMPLE 2: ESTIMATING COST FOR 25 HOURS

$$- h = 25$$

CALCULATING:

$$c = 18(25) + 634$$

$$c = 450 + 634 = 1084$$

RESULT: THE TOTAL COST FOR 25 HOURS IS \$1,084.

THIS METHOD ALLOWS CLIENTS AND SERVICE PROVIDERS TO PLAN BUDGETS AND MAKE INFORMED DECISIONS BASED ON ANTICIPATED HOURS.

GRAPHING THE LINEAR FUNCTION: VISUALIZING COST CHANGES

GRAPHING THE EQUATION $C = 18H + 634$ PROVIDES VALUABLE INSIGHTS INTO HOW COSTS CHANGE WITH HOURS.

STEPS TO GRAPH

1. PLOT THE Y-INTERCEPT: WHEN $H = 0$, $C = 634$. THIS IS THE STARTING POINT ON THE COST AXIS.
2. USE THE SLOPE: FOR EVERY ADDITIONAL HOUR, THE COST INCREASES BY \$18. FROM THE INITIAL POINT, MOVE VERTICALLY BY 18 UNITS FOR EACH INCREASE OF 1 IN H .
3. PLOT ADDITIONAL POINTS: FOR EXAMPLE, $H = 5$ YIELDS $C = 18(5) + 634 = 724$, AND $H = 15$ YIELDS $C = 18(15) + 634 = 904$.
4. CONNECT THE POINTS: DRAW A STRAIGHT LINE PASSING THROUGH THESE POINTS.

INTERPRETING THE GRAPH

- THE SLOPE OF 18 INDICATES A STEADY INCREASE IN COSTS.
- THE Y-INTERCEPT AT 634 REPRESENTS THE INITIAL FIXED COST.
- THE GRAPH CAN HELP VISUALIZE AT WHAT POINT COSTS ESCALATE SIGNIFICANTLY AND AID IN BUDGETING.

APPLICATIONS AND DECISION-MAKING

UNDERSTANDING HOW TO EVALUATE AND INTERPRET THIS LINEAR FUNCTION HAS PRACTICAL IMPLICATIONS IN VARIOUS FIELDS.

BUDGET PLANNING

- ESTIMATE TOTAL COSTS BASED ON EXPECTED HOURS.
- COMPARE DIFFERENT SCENARIOS BY ADJUSTING HOURS TO SEE HOW COSTS FLUCTUATE.
- IDENTIFY BREAK-EVEN POINTS WHERE COSTS BECOME PROHIBITIVE.

NEGOTIATIONS AND PRICING STRATEGIES

- CLIENTS CAN NEGOTIATE BASED ON EXPECTED HOURS.
- SERVICE PROVIDERS CAN SET THRESHOLDS TO MAXIMIZE PROFITS.

COST CONTROL

- RECOGNIZE THE IMPACT OF INCREASING HOURS.
- IMPLEMENT STRATEGIES TO REDUCE HOURS OR FIXED COSTS FOR EFFICIENCY.

LIMITATIONS OF LINEAR MODELS

WHILE LINEAR FUNCTIONS ARE POWERFUL TOOLS, THEY HAVE LIMITATIONS.

- ASSUMPTION OF CONSTANT RATES: THEY ASSUME THE RATE OF CHANGE REMAINS CONSTANT, WHICH MAY NOT REFLECT REAL-WORLD COMPLEXITIES.
- FIXED COSTS MAY VARY: THE INITIAL FEE COULD CHANGE OVER TIME DUE TO INFLATION OR OTHER FACTORS.
- NON-LINEAR SCENARIOS: SOME COSTS MAY INCREASE EXPONENTIALLY OR DECREASE AT VARYING RATES, REQUIRING DIFFERENT MODELS.

UNDERSTANDING THESE LIMITATIONS HELPS USERS APPLY LINEAR FUNCTIONS APPROPRIATELY AND CONSIDER MORE COMPLEX MODELS WHEN NECESSARY.

SUMMARY: MASTERING THE EVALUATION OF LINEAR FUNCTIONS

THE EQUATION $C = 18H + 634$ EXEMPLIFIES HOW LINEAR FUNCTIONS MODEL REAL-WORLD PROBLEMS INVOLVING COSTS AND ACTIVITY LEVELS. BY ANALYZING EACH COMPONENT, EVALUATING SPECIFIC SCENARIOS, AND VISUALIZING THE RELATIONSHIPS THROUGH GRAPHING, INDIVIDUALS AND ORGANIZATIONS CAN MAKE INFORMED DECISIONS, PLAN BUDGETS, AND OPTIMIZE RESOURCE ALLOCATION.

KEY TAKEAWAYS INCLUDE:

- RECOGNIZING THE COMPONENTS OF THE LINEAR FUNCTION AND THEIR REAL-WORLD MEANINGS.
- PRACTICING SUBSTITUTION AND CALCULATION TO EVALUATE COSTS AT VARIOUS ACTIVITY LEVELS.
- USING GRAPHING AS A TOOL FOR VISUALIZATION AND STRATEGIC PLANNING.
- BEING AWARE OF THE MODEL'S LIMITATIONS AND KNOWING WHEN MORE COMPLEX FUNCTIONS ARE NEEDED.

MASTERING THE EVALUATION OF SUCH EQUATIONS EMPOWERS STUDENTS AND PROFESSIONALS ALIKE TO NAVIGATE FINANCIAL AND OPERATIONAL CHALLENGES WITH CONFIDENCE AND CLARITY. AS LINEAR FUNCTIONS CONTINUE TO UNDERPIN MANY ASPECTS OF BUSINESS AND DAILY LIFE, DEVELOPING PROFICIENCY IN THEIR ANALYSIS REMAINS AN INVALUABLE SKILL.

IN CONCLUSION, WHETHER ESTIMATING PROJECT COSTS, SETTING SERVICE FEES, OR ANALYZING BUDGETS, UNDERSTANDING AND EVALUATING LINEAR FUNCTIONS LIKE $C = 18H + 634$ IS ESSENTIAL. IT TRANSFORMS ABSTRACT MATHEMATICS INTO PRACTICAL INSIGHTS, ENABLING BETTER DECISION-MAKING AND RESOURCE MANAGEMENT ACROSS COUNTLESS SCENARIOS.
