

COMPLETE THE IMPLEMENTATION OF THE HOUSETYPE CLASS DEFINED IN EXERCISES 11 AND 12 OF THIS CHAPTER. THE

COMPLETE THE IMPLEMENTATION OF THE HOUSETYPE CLASS DEFINED IN EXERCISES 11 AND 12 OF THIS CHAPTER. THE TASK INVOLVES DEVELOPING A COMPREHENSIVE, EFFICIENT, AND WELL-STRUCTURED CLASS IN C++ THAT MODELS A HOUSE TYPE WITH ALL NECESSARY ATTRIBUTES AND FUNCTIONALITIES. THIS GUIDE WILL WALK YOU THROUGH THE STEP-BY-STEP PROCESS OF IMPLEMENTING THE HOUSETYPE CLASS, ENSURING IT ADHERES TO BEST PRACTICES, IS EASY TO UNDERSTAND, AND IS OPTIMIZED FOR SEARCH ENGINES. WHETHER YOU'RE A BEGINNER OR AN EXPERIENCED PROGRAMMER, THIS ARTICLE WILL PROVIDE VALUABLE INSIGHTS INTO CLASS DESIGN, MEMBER FUNCTIONS, ENCAPSULATION, AND MORE.

UNDERSTANDING THE REQUIREMENTS FOR THE HOUSETYPE CLASS

BEFORE DIVING INTO THE IMPLEMENTATION, IT'S CRUCIAL TO UNDERSTAND WHAT THE CLASS NEEDS TO ACCOMPLISH. TYPICALLY, EXERCISES 11 AND 12 IN PROGRAMMING CHAPTERS OUTLINE SPECIFIC ATTRIBUTES AND BEHAVIORS FOR SUCH CLASSES.

KEY ATTRIBUTES OF HOUSETYPE

- TYPE OF HOUSE (E.G., APARTMENT, VILLA, BUNGALOW)
- NUMBER OF BEDROOMS
- NUMBER OF BATHROOMS
- SIZE OF THE HOUSE (IN SQUARE FEET OR METERS)
- LOCATION OR ADDRESS (OPTIONAL, DEPENDING ON EXERCISES)

COMMON MEMBER FUNCTIONS

- CONSTRUCTORS TO INITIALIZE OBJECTS
- GETTERS AND SETTERS FOR EACH ATTRIBUTE
- A DISPLAY FUNCTION TO OUTPUT HOUSE DETAILS
- COMPARISON OPERATORS (E.G., TO COMPARE SIZES)
- INPUT VALIDATION METHODS (TO ENSURE DATA INTEGRITY)

DESIGNING THE HOUSETYPE CLASS

ENCAPSULATION AND DATA HIDING

ENSURE THAT ALL DATA MEMBERS ARE PRIVATE, EXPOSING ONLY NECESSARY FUNCTIONALITIES THROUGH PUBLIC MEMBER FUNCTIONS. THIS APPROACH ENHANCES DATA SECURITY AND MAINTAINS INTEGRITY.

CLASS DECLARATION

START BY DECLARING THE CLASS WITH RELEVANT ATTRIBUTES AND FUNCTIONS:

```
'''CPP
CLASS HOUSETYPE {
PRIVATE:
STD::STRING HOUSETYPE; // E.G., "APARTMENT", "VILLA"
INT NUMBEDROOMS;
INT NUMBATHROOMS;
DOUBLE SIZE; // SIZE IN SQUARE METERS
STD::STRING ADDRESS;

PUBLIC:
```

```

// CONSTRUCTORS
HouseType();
HouseType(const std::string& type, int bedrooms, int bathrooms, double size, const std::string& addr);

// GETTERS
std::string getHouseType() const;
int getNumBedrooms() const;
int getNumBathrooms() const;
double getSize() const;
std::string getAddress() const;

// SETTERS
void setHouseType(const std::string& type);
void setNumBedrooms(int bedrooms);
void setNumBathrooms(int bathrooms);
void setSize(double size);
void setAddress(const std::string& addr);

// DISPLAY FUNCTION
void displayDetails() const;

// ADDITIONAL FUNCTIONALITIES
bool isLargerThan(const HouseType& other) const;
};
"""

```

IMPLEMENTING THE HOUSETYPE CLASS

STEP 1: CONSTRUCTOR DEFINITIONS

IMPLEMENT DEFAULT AND PARAMETERIZED CONSTRUCTORS TO INITIALIZE OBJECTS PROPERLY.

```

"""CPP
// DEFAULT CONSTRUCTOR
HouseType::HouseType()
: HouseType("UNKNOWN", numBedrooms(0), numBathrooms(0), size(0.0), address("UNKNOWN")) {}

// PARAMETERIZED CONSTRUCTOR
HouseType::HouseType(const std::string& type, int bedrooms, int bathrooms, double size, const std::string&
addr)
: HouseType(type, numBedrooms(bedrooms), numBathrooms(bathrooms), size(size), address(addr)) {}
"""

```

STEP 2: GETTERS AND SETTERS

IMPLEMENT FUNCTIONS TO ACCESS AND MODIFY PRIVATE DATA MEMBERS SAFELY.

```

"""CPP
std::string HouseType::getHouseType() const {
return houseType;
}

void HouseType::setHouseType(const std::string& type) {
houseType = type;
}

int HouseType::getNumBedrooms() const {

```

```
RETURN NUMBEDROOMS;
}
```

```
VOID HOUSETYPE::SETNUMBEDROOMS(INT BEDROOMS) {
IF (BEDROOMS >= 0) {
NUMBEDROOMS = BEDROOMS;
}
}
```

```
INT HOUSETYPE::GETNUMBATHROOMS() CONST {
RETURN NUMBATHROOMS;
}
```

```
VOID HOUSETYPE::SETNUMBATHROOMS(INT BATHROOMS) {
IF (BATHROOMS >= 0) {
NUMBATHROOMS = BATHROOMS;
}
}
```

```
DOUBLE HOUSETYPE::GETSIZE() CONST {
RETURN SIZE;
}
```

```
VOID HOUSETYPE::SETSIZE(DOUBLE SZ) {
IF (SZ >= 0) {
SIZE = SZ;
}
}
```

```
STD::STRING HOUSETYPE::GETADDRESS() CONST {
RETURN ADDRESS;
}
```

```
VOID HOUSETYPE::SETADDRESS(CONST STD::STRING& ADDR) {
ADDRESS = ADDR;
}
'''
```

STEP 3: DISPLAY FUNCTION

CREATE A METHOD TO OUTPUT ALL RELEVANT DETAILS ABOUT THE HOUSE OBJECT.

```
'''CPP
VOID HOUSETYPE::DISPLAYDETAILS() CONST {
STD::COUT <STD::COUT <STD::COUT <STD::COUT <STD::COUT <
'''
```

STEP 4: COMPARISON METHOD

IMPLEMENT A SIMPLE COMPARISON TO DETERMINE IF ONE HOUSE IS LARGER THAN ANOTHER.

```
'''CPP
BOOL HOUSETYPE::ISLARGERTHAN(CONST HOUSETYPE& OTHER) CONST {
RETURN SIZE > OTHER.SIZE;
}
'''
```

ENHANCING THE HOUSETYPE CLASS

TO MAKE THE CLASS MORE ROBUST AND USER-FRIENDLY, CONSIDER ADDING ADDITIONAL FEATURES.

INPUT VALIDATION

ENSURE INPUT DATA IS VALID BEFORE SETTING ATTRIBUTES.

```
```CPP
// EXAMPLE: VALIDATE SIZE
VOID HOUSETYPE::SETSIZE(DOUBLE SZ) {
 IF (SZ >= 0) {
 SIZE = SZ;
 } ELSE {
 STD::CERR <{}
 }
}
```
```

OVERLOADING OPERATORS

OVERLOAD COMPARISON OPERATORS FOR MORE INTUITIVE COMPARISONS.

```
```CPP
BOOL OPERATOR<(CONST HOUSETYPE& LHS, CONST HOUSETYPE& RHS) {
 RETURN LHS.GETSIZE() < RHS.GETSIZE();
}

BOOL OPERATOR==(CONST HOUSETYPE& LHS, CONST HOUSETYPE& RHS) {
 RETURN LHS.GETSIZE() == RHS.GETSIZE() &&
 LHS.GETHOUSETYPE() == RHS.GETHOUSETYPE() &&
 LHS.GETNUMBEDROOMS() == RHS.GETNUMBEDROOMS() &&
 LHS.GETNUMBATHROOMS() == RHS.GETNUMBATHROOMS() &&
 LHS.GETADDRESS() == RHS.GETADDRESS();
}
```
```

PRACTICAL USAGE EXAMPLE

HERE'S HOW YOU CAN USE THE HOUSETYPE CLASS IN A MAIN FUNCTION.

```
```CPP
INT MAIN() {
 HOUSETYPE HOUSE1("VILLA", 4, 3, 250.5, "123 MAPLE STREET");
 HOUSETYPE HOUSE2("APARTMENT", 2, 1, 80.0, "456 OAK AVENUE");

 HOUSE1.DISPLAYDETAILS();
 STD::COUT <HOUSE2.DISPLAYDETAILS();

 IF (HOUSE1.ISLARGERTHAN(HOUSE2)) {
 STD::COUT <{} ELSE {
 STD::COUT <{}
 }
 }

 RETURN 0;
}
```
```

BEST PRACTICES FOR IMPLEMENTING THE HOUSETYPE CLASS

- USE CONST CORRECTNESS: MARK FUNCTIONS THAT DO NOT MODIFY DATA MEMBERS AS 'CONST'.
- VALIDATE INPUT DATA: PREVENT INVALID DATA FROM CORRUPTING OBJECT STATE.
- COMMENT YOUR CODE: CLEAR COMMENTS IMPROVE READABILITY AND MAINTAINABILITY.
- FOLLOW NAMING CONVENTIONS: CONSISTENT NAMING ENHANCES CODE CLARITY.
- SEPARATE DECLARATION AND IMPLEMENTATION: USE HEADER ('.H') AND SOURCE ('.CPP') FILES FOR BETTER ORGANIZATION.

SEO OPTIMIZATION TIPS FOR CONTENT ABOUT HOUSETYPE CLASS

- USE RELEVANT KEYWORDS SUCH AS C++ HOUSETYPE CLASS IMPLEMENTATION, OBJECT-ORIENTED PROGRAMMING HOUSES, CLASS DESIGN IN C++, ENCAPSULATION IN C++ CLASSES, AND HOW TO IMPLEMENT A CLASS IN C++.
- INCLUDE DESCRIPTIVE SUBHEADINGS TO IMPROVE READABILITY AND SEARCH ENGINE RANKING.
- INCORPORATE INTERNAL LINKS TO RELATED TOPICS LIKE C++ CLASS TUTORIALS OR OBJECT-ORIENTED PROGRAMMING CONCEPTS.
- USE BULLET POINTS AND NUMBERED LISTS FOR BETTER CONTENT STRUCTURE.
- WRITE IN CLEAR, CONCISE LANGUAGE TARGETING PROGRAMMERS SEEKING IMPLEMENTATION GUIDANCE.

CONCLUSION

COMPLETING THE IMPLEMENTATION OF THE HOUSETYPE CLASS INVOLVES UNDERSTANDING THE CORE ATTRIBUTES, DESIGNING A ROBUST CLASS STRUCTURE, AND IMPLEMENTING ESSENTIAL MEMBER FUNCTIONS WITH BEST PROGRAMMING PRACTICES. BY ENCAPSULATING DATA, PROVIDING USER-FRIENDLY INTERFACES, AND INCLUDING COMPARISON FUNCTIONALITIES, YOUR HOUSETYPE CLASS BECOMES A POWERFUL TOOL FOR MODELING REAL ESTATE PROPERTIES IN C++. REMEMBER TO VALIDATE INPUT DATA, COMMENT YOUR CODE THOROUGHLY, AND CONSIDER ENHANCING FEATURES SUCH AS OPERATOR OVERLOADING FOR MORE INTUITIVE USAGE. WHETHER FOR ACADEMIC EXERCISES OR REAL-WORLD APPLICATIONS, MASTERING CLASS IMPLEMENTATION LIKE HOUSETYPE IS FUNDAMENTAL TO BECOMING A PROFICIENT C++ PROGRAMMER.

ADDITIONAL RESOURCES

- [C++ CLASS TUTORIAL]([HTTPS://WWW.LEARNCPP.COM/CPP-TUTORIAL/CLASSES/](https://www.learncpp.com/cpp-tutorial/classes/))

- [ENCAPSULATION IN C++]([HTTPS://WWW.GEEKSFORGEKS.ORG/ENCAPSULATION-IN-CPP/](https://www.geeksforgeeks.org/encapsulation-in-cpp/))

BY FOLLOWING THIS COMPREHENSIVE GUIDE, YOU WILL BE ABLE TO SUCCESSFULLY COMPLETE AND EXTEND THE HOUSETYPE CLASS, MAKING IT A VALUABLE COMPONENT OF YOUR C++ PROGRAMMING PROJECTS.

FREQUENTLY ASKED QUESTIONS

WHAT ARE THE KEY ATTRIBUTES TO INCLUDE WHEN COMPLETING THE IMPLEMENTATION OF THE HOUSETYPE CLASS?

KEY ATTRIBUTES TYPICALLY INCLUDE HOUSE TYPE (E.G., APARTMENT, VILLA), SIZE, NUMBER OF BEDROOMS, LOCATION, AND PRICE, DEPENDING ON THE SPECIFICS OF EXERCISES 11 AND 12.

How should the constructor of the Housetype class be implemented to ensure proper initialization?

The constructor should accept parameters for all relevant attributes and assign them to instance variables, ensuring each object is properly initialized upon creation.

What methods are essential to include in the Housetype class to make it functional?

Essential methods may include getters and setters for each attribute, a method to display house details, and possibly comparison methods if comparing house types is required.

How can we implement a method to compare two Housetype objects based on price or size?

Create a comparison method that takes another Housetype object as a parameter and returns the comparison result based on selected attributes like price or size.

What considerations should be made for data validation within the Housetype class?

Ensure that attributes like size, number of bedrooms, and price are validated to be positive numbers, and restrict house types to predefined categories if applicable.

How can we enhance the Housetype class to support user input and display functionalities?

Implement methods such as `from_input()` to collect user input and `display()` to neatly print house details, making the class more interactive.

What is the importance of overriding the `__str__()` method in the Housetype class?

Overriding `__str__()` allows for a meaningful string representation of the object, making it easier to print and understand the house details.

How does completing the Housetype class contribute to building a larger real estate management system?

A well-implemented Housetype class serves as a core data structure, enabling efficient management, comparison, and display of house information within the system.

Are there common pitfalls to avoid when completing the implementation of the Housetype class?

Common pitfalls include neglecting data validation, not implementing necessary methods for comparison or display, and improper initialization of attributes.

What best practices should be followed to ensure the Housetype class is

ROBUST AND MAINTAINABLE?

FOLLOW PRINCIPLES LIKE ENCAPSULATION BY MAKING ATTRIBUTES PRIVATE, PROVIDE CLEAR AND CONSISTENT GETTER/SETTER METHODS, INCLUDE DOCUMENTATION, AND WRITE TEST CASES TO VALIDATE FUNCTIONALITY.

ADDITIONAL RESOURCES

COMPLETE THE IMPLEMENTATION OF THE HOUSETYPE CLASS DEFINED IN EXERCISES 11 AND 12 OF THIS CHAPTER

IN THE REALM OF OBJECT-ORIENTED PROGRAMMING, DESIGNING CLASSES THAT ACCURATELY MODEL REAL-WORLD ENTITIES IS FUNDAMENTAL. THE HOUSETYPE CLASS, INTRODUCED IN EXERCISES 11 AND 12 OF THIS CHAPTER, EXEMPLIFIES THIS PRINCIPLE BY ENCAPSULATING THE ATTRIBUTES AND BEHAVIORS ASSOCIATED WITH VARIOUS HOUSE TYPES. COMPLETING ITS IMPLEMENTATION NOT ONLY ENHANCES UNDERSTANDING OF CLASS DESIGN AND DATA ENCAPSULATION BUT ALSO PROVIDES A FOUNDATION FOR BUILDING MORE COMPLEX SYSTEMS SUCH AS REAL ESTATE APPLICATIONS, PROPERTY MANAGEMENT SOFTWARE, OR SIMULATION ENVIRONMENTS. THIS ARTICLE OFFERS AN IN-DEPTH EXPLORATION OF HOW TO FULLY IMPLEMENT THE HOUSETYPE CLASS, DISCUSSES ITS CORE COMPONENTS, AND ANALYZES BEST PRACTICES FOR ENSURING ROBUSTNESS AND FLEXIBILITY.

UNDERSTANDING THE CONTEXT AND PURPOSE OF THE HOUSETYPE CLASS

BEFORE DELVING INTO THE IMPLEMENTATION DETAILS, IT IS ESSENTIAL TO UNDERSTAND THE MOTIVATION BEHIND CREATING THE HOUSETYPE CLASS AND ITS INTENDED USE CASES.

OBJECTIVES OF THE CLASS

THE HOUSETYPE CLASS AIMS TO:

- MODEL DIFFERENT TYPES OF HOUSES, SUCH AS "APARTMENT," "DETACHED," "SEMI-DETACHED," "TOWNHOUSE," ETC.
- STORE ATTRIBUTES RELEVANT TO HOUSE TYPES, INCLUDING NAME, DESCRIPTION, AND POSSIBLY CHARACTERISTICS LIKE AVERAGE SIZE, NUMBER OF ROOMS, OR PRICE RANGE.
- PROVIDE METHODS TO ACCESS (GETTERS) AND MODIFY (SETTERS) THESE ATTRIBUTES.
- SUPPORT OPERATIONS SUCH AS DISPLAYING DETAILS OR COMPARING HOUSE TYPES.

RELEVANCE TO EXERCISES 11 AND 12

IN EXERCISES 11 AND 12, STUDENTS ARE TYPICALLY TASKED WITH DEFINING AND IMPLEMENTING CLASSES THAT INVOLVE:

- DATA ENCAPSULATION
- CONSTRUCTORS
- ACCESSOR (GETTER) AND MUTATOR (SETTER) METHODS
- POSSIBLY, METHOD OVERRIDING OR ADDITIONAL BEHAVIORS

COMPLETING THE HOUSETYPE CLASS ALIGNS WITH THESE OBJECTIVES, REINFORCING CORE OBJECT-ORIENTED PROGRAMMING CONCEPTS.

DESIGNING THE HOUSETYPE CLASS: CORE COMPONENTS AND ATTRIBUTES

A WELL-STRUCTURED CLASS BEGINS WITH DEFINING ITS ATTRIBUTES AND UNDERSTANDING THE DATA IT NEEDS TO ENCAPSULATE.

IDENTIFYING ATTRIBUTES

BASED ON TYPICAL HOUSE TYPE CHARACTERISTICS, THE CLASS MAY INCLUDE:

- NAME: THE NAME OF THE HOUSE TYPE (E.G., "APARTMENT")
- DESCRIPTION: A BRIEF DESCRIPTION OF THE HOUSE TYPE
- AVERAGESize: APPROXIMATE SIZE IN SQUARE FEET OR METERS
- NUMBEROfRooms: TYPICAL NUMBER OF ROOMS
- PRICERange: ESTIMATED PRICE RANGE FOR THIS HOUSE TYPE

OF COURSE, THE ATTRIBUTES CAN BE TAILORED BASED ON SPECIFIC EXERCISE REQUIREMENTS OR APPLICATION CONTEXT.

DATA TYPES AND ACCESS MODIFIERS

CHOOSING APPROPRIATE DATA TYPES IS CRUCIAL:

- NAME: STRING
- DESCRIPTION: STRING
- AVERAGESize: DOUBLE OR INT
- NUMBEROfRooms: INT
- PRICERange: STRING OR A CUSTOM CLASS IF MORE DETAILED

ENCAPSULATION IS ACHIEVED BY DECLARING ATTRIBUTES AS PRIVATE, ENSURING THEY ARE ACCESSIBLE ONLY VIA PUBLIC METHODS.

IMPLEMENTING THE HOUSETYPE CLASS: STEP-BY-STEP GUIDE

A COMPREHENSIVE IMPLEMENTATION INVOLVES DEFINING THE CLASS STRUCTURE, CONSTRUCTORS, ACCESSOR/MUTATOR METHODS, AND ADDITIONAL FUNCTIONALITIES.

STEP 1: CLASS DECLARATION AND ATTRIBUTES

```
""  
JAVA  
PUBLIC CLASS HOUSETYPE {  
    PRIVATE STRING NAME;  
    PRIVATE STRING DESCRIPTION;  
    PRIVATE DOUBLE AVERAGESize;  
    PRIVATE INT NUMBEROfRooms;  
    PRIVATE STRING PRICERange;  
  
    // CONSTRUCTOR, GETTERS, SETTERS, AND OTHER METHODS WILL FOLLOW  
}  
""
```

STEP 2: CONSTRUCTORS

CONSTRUCTORS INITIALIZE OBJECTS WITH MEANINGFUL DATA. PROVIDING MULTIPLE CONSTRUCTORS ENHANCES FLEXIBILITY.

```
```java
// DEFAULT CONSTRUCTOR
PUBLIC HOUSETYPE() {
 THIS.NAME = "";
 THIS.DESCRPTION = "";
 THIS.AVERAGESize = 0.0;
 THIS.NUMBEROFROOMS = 0;
 THIS.PRICERange = "";
}

// PARAMETERIZED CONSTRUCTOR
PUBLIC HOUSETYPE(String NAME, String DESCRIPTION, DOUBLE AVERAGESize, INT NUMBEROFROOMS, String PRICERange) {
 THIS.NAME = NAME;
 THIS.DESCRPTION = DESCRIPTION;
 THIS.AVERAGESize = AVERAGESize;
 THIS.NUMBEROFROOMS = NUMBEROFROOMS;
 THIS.PRICERange = PRICERange;
}
```
```

STEP 3: ACCESSOR AND MUTATOR METHODS

GETTERS AND SETTERS ENABLE CONTROLLED ACCESS AND MODIFICATION.

```
```java
PUBLIC String GETNAME() {
 RETURN NAME;
}

PUBLIC VOID SETNAME(String NAME) {
 THIS.NAME = NAME;
}

PUBLIC String GETDESCRIPTION() {
 RETURN DESCRIPTION;
}

PUBLIC VOID SETDESCRIPTION(String DESCRIPTION) {
 THIS.DESCRPTION = DESCRIPTION;
}

PUBLIC DOUBLE GETAVERAGESize() {
 RETURN AVERAGESize;
}

PUBLIC VOID SETAVERAGESize(DOUBLE AVERAGESize) {
 THIS.AVERAGESize = AVERAGESize;
}

PUBLIC INT GETNUMBEROFROOMS() {
 RETURN NUMBEROFROOMS;
}
```
```

```

PUBLIC VOID SETNUMBEROFROOMS(INT NUMBEROFROOMS) {
THIS.NUMBEROFROOMS = NUMBEROFROOMS;
}

PUBLIC STRING GETPRICERANGE() {
RETURN PRICERANGE;
}

PUBLIC VOID SETPRICERANGE(STRING PRICERANGE) {
THIS.PRICERANGE = PRICERANGE;
}
'''

```

STEP 4: ADDITIONAL METHODS

METHODS SUCH AS `DISPLAYDETAILS()` CAN PROVIDE FORMATTED OUTPUT FOR USER-FRIENDLY DISPLAY.

```

'''JAVA
PUBLIC VOID DISPLAYDETAILS() {
SYSTEM.OUT.PRINTLN("HOUSE TYPE: " + NAME);
SYSTEM.OUT.PRINTLN("DESCRIPTION: " + DESCRIPTION);
SYSTEM.OUT.PRINTLN("AVERAGE SIZE: " + AVERAGESIZE + " SQ FT");
SYSTEM.OUT.PRINTLN("NUMBER OF ROOMS: " + NUMBEROFROOMS);
SYSTEM.OUT.PRINTLN("PRICE RANGE: " + PRICERANGE);
}
'''

```

OPTIONALLY, METHODS FOR COMPARISON OR VALIDATION CAN BE ADDED.

ENHANCING THE CLASS: BEST PRACTICES AND ADDITIONAL FEATURES

TO CREATE A ROBUST AND VERSATILE CLASS, CONSIDER IMPLEMENTING THE FOLLOWING FEATURES:

OVERRIDE toString() METHOD

PROVIDING A MEANINGFUL STRING REPRESENTATION AIDS DEBUGGING AND LOGGING.

```

'''JAVA
@OVERRIDE
PUBLIC STRING toString() {
RETURN "HOUSETYPE{" +
"NAME=" + NAME + '\n' +
", DESCRIPTION=" + DESCRIPTION + '\n' +
", AVERAGESIZE=" + AVERAGESIZE +
", NUMBEROFROOMS=" + NUMBEROFROOMS +
", PRICERANGE=" + PRICERANGE + '\n' +
"}";
}
'''

```

IMPLEMENT COMPARABLE INTERFACE

ENABLING COMPARISON BASED ON ATTRIBUTES, SUCH AS SIZE OR PRICE, ALLOWS SORTING.

```
```java
PUBLIC CLASS HOUSETYPE IMPLEMENTS COMPARABLE {
// EXISTING CODE

 @Override
 PUBLIC INT COMPARETO(HOUSETYPE OTHER) {
 RETURN DOUBLE.COMPARE(THIS.AVERAGE SIZE, OTHER.AVERAGE SIZE);
 }
}
```
```

VALIDATION AND ERROR HANDLING

ENSURE DATA INTEGRITY BY VALIDATING INPUT IN SETTERS OR CONSTRUCTORS:

```
```java
PUBLIC VOID SETNUMBEROFROOMS(INT NUMBEROFROOMS) {
IF (NUMBEROFROOMS < 0) {
 THROW NEW ILLEGALARGUMENTEXCEPTION("NUMBER OF ROOMS CANNOT BE NEGATIVE");
}
THIS.NUMBEROFROOMS = NUMBEROFROOMS;
}
```
```

SERIALIZATION SUPPORT

FACILITATES SAVING OBJECTS TO FILES OR TRANSMITTING OVER NETWORKS.

```
```java
PUBLIC CLASS HOUSETYPE IMPLEMENTS SERIALIZABLE {
// EXISTING CODE
}
```
```

APPLYING AND TESTING THE HOUSETYPE CLASS

ONCE IMPLEMENTED, THOROUGH TESTING ENSURES THE CLASS FUNCTIONS AS INTENDED.

SAMPLE USAGE

```
```java
PUBLIC CLASS MAIN {
PUBLIC STATIC VOID MAIN(STRING[] ARGS) {
 HOUSETYPE APARTMENT = NEW HOUSETYPE(
```

```

"APARTMENT",
"A SELF-CONTAINED HOUSING UNIT IN A BUILDING.",
850.0,
3,
"$200,000 - $300,000"
);

APARTMENT.DISPLAYDETAILS();

// TESTING toString()
SYSTEM.OUT.PRINTLN(APARTMENT.toString());

// TESTING GETTERS
SYSTEM.OUT.PRINTLN("NAME: " + APARTMENT.GETNAME());

// TESTING SETTERS
APARTMENT.SETNAME("LUXURY APARTMENT");
SYSTEM.OUT.PRINTLN("UPDATED NAME: " + APARTMENT.GETNAME());
}
}
'''

```

## UNIT TESTS

DEVELOPING UNIT TESTS (USING JUNIT, FOR EXAMPLE) CAN VERIFY EACH METHOD'S CORRECTNESS, ENSURING MAINTAINABILITY.

---

## CONCLUSION: THE SIGNIFICANCE OF A COMPLETE HOUSETYPE CLASS IMPLEMENTATION

THE COMPREHENSIVE IMPLEMENTATION OF THE HOUSETYPE CLASS DEMONSTRATES FUNDAMENTAL OBJECT-ORIENTED PROGRAMMING PRINCIPLES, INCLUDING ENCAPSULATION, CONSTRUCTOR OVERLOADING, METHOD OVERRIDING, AND VALIDATION. SUCH A CLASS SERVES AS A BUILDING BLOCK FOR MORE SOPHISTICATED APPLICATIONS, ENABLING DEVELOPERS TO MODEL REAL-WORLD ENTITIES WITH CLARITY AND PRECISION. THROUGH CAREFUL DESIGN AND THOROUGH TESTING, THE HOUSETYPE CLASS CAN BE EXTENDED WITH ADDITIONAL FEATURES LIKE INHERITANCE, POLYMORPHISM, OR INTEGRATION WITH DATABASES, PAVING THE WAY FOR SCALABLE AND MAINTAINABLE SOFTWARE SOLUTIONS.

BY COMPLETING THIS IMPLEMENTATION, STUDENTS NOT ONLY FULFILL THE OBJECTIVES OF EXERCISES 11 AND 12 BUT ALSO GAIN PRACTICAL INSIGHTS INTO CLASS DESIGN STRATEGIES, CODE ROBUSTNESS, AND THE IMPORTANCE OF THOUGHTFUL ATTRIBUTE MANAGEMENT—SKILLS ESSENTIAL FOR ANY ASPIRING SOFTWARE DEVELOPER.
