Overview of the County Fair Ticket Sales

Attendance and Ticket Purchases

The ticket sales data indicates a healthy interest in the event, which is a vital part of the local culture and economy.

Ticket Pricing Structure

The pricing for the county fair tickets was set at:

- \$7 for Adults: Typically, individuals aged 18 and above.
- \$3 for Children: Usually for visitors aged 3 to 17.
- Free Entry for Children Under 3: Often, young children under three years old can enter free of charge, though policies may vary.

This tiered pricing system aims to make the fair accessible to families while generating revenue to cover operational costs.

Analyzing the Ticket Sales Data

Estimating the Number of Adults and Children Attending

To understand the demographic distribution of visitors, we can analyze the total tickets sold:

Suppose the number of adult tickets sold is A , and the number of children's tickets is C .

Given:

- Total tickets sold: $A + C = 370$
- Total revenue: $\$7A + \$3C$

If we know the total revenue generated from ticket sales, we can estimate the number of adults and children attending. For example, if the total revenue was \$2,300, then:

$$\backslash[7A + 3C = 2,300 \backslash]$$

And from the total tickets:

$$\backslash[A + C = 370 \backslash]$$

We can solve this system of equations to find approximate numbers for A and C .

Sample Calculation:

- From the second equation: $\backslash(C = 370 - A \backslash)$
- Substitute into the first:

$$\backslash[7A + 3(370 - A) = 2,300 \backslash]$$

$$\backslash[7A + 1,110 - 3A = 2,300 \backslash]$$

$$\backslash[4A + 1,110 = 2,300 \backslash]$$

$$\backslash[4A = 1,190 \backslash]$$

$$\backslash[A = 297.5 \backslash]$$

Since the number of tickets must be whole numbers, approximately 298 adults and 72 children attended.

This example illustrates how ticket sales data can be used to estimate visitor demographics, aiding organizers in planning for future events.

The total revenue from ticket sales contributes significantly to the county fair's funding. It helps cover expenses such as:
