About What Percentage Of Earth's People Live In Areas Where Water Shortages Are Common? 50%.51%.52%.53%. This question underscores a critical global issue: water scarcity. As the world's population continues to grow and climate change exacerbates environmental stresses, understanding the extent of water shortages becomes increasingly urgent. According to recent studies and reports from international organizations, a significant portion of the global population faces challenges related to access to clean and sufficient water. But what exactly is the percentage? Is it closer to 50%, 51%, 52%, or 53%? This article explores these figures in detail, examines the causes of water scarcity, its impacts, and what can be done to address this global crisis.
