

What consideration make us to judge water pollution is now worse than it was in the past

What considerations make us to judge water pollution is now worse than it was in the past

Water pollution has become a growing concern worldwide, prompting many to believe that the current state of water quality is more severe than in previous eras. Several factors contribute to this perception, rooted in scientific data, environmental changes, and societal impacts. By examining these considerations, we can better understand why water pollution is perceived as more critical today and what drives these assessments.
