A Subject Presents To The Emergency Department (ED) With Complaints Of Chest Pain And Shortness Of Breath

A subject presents to the emergency department (ED) with complaints of chest pain and shortness of breath. These symptoms are common yet potentially life-threatening, requiring prompt assessment, diagnosis, and management. Chest pain coupled with dyspnea (shortness of breath) can signify a spectrum of underlying conditions, ranging from benign to critical. Early recognition and appropriate intervention are vital to improving patient outcomes. This article provides an in-depth overview of the evaluation, differential diagnosis, and management strategies for patients presenting with these concerning symptoms.
